

BACKUP SERVICE

WHAT IS IT?

TechQuarters Backup is a business level online backup service from TechQuarters, which is secure, reliable and easy to use. It backs up your selected company data, securely and safely over the internet due to the high level of encryption employed. The data is then safely stored on the award winning, fully resilient Data Centre, e.g. Microsoft Azure.

HOW DOES IT WORK?

TechQuarters Backup works by setting up a secure encrypted link from your office to the TechQuarters data storage centre. Data is then replicated daily by default, and only replicates the data that has changed since the last copy was made. In the event of data loss we will restore your files immediately upon request and get you back up and running within hours.

WHAT ARE THE BENEFITS?

- Peace of mind
- Single, scalable solution
- Cost-effectiveness
- Reliable
- Business continuity
- Secure
