

# DIGITIZE

## YOUR CLOUD PLANNING AND MIGRATION SERVICE

### WHAT IS IT?

TechQuarters has a unique end-to-end solution called Digitize. It guides and supports organizations on a planned and systematic journey to the cloud.

What sets Digitize apart from other transformational solutions is our meticulous audit and scoping processes, detailed cloud road-maps, proactive recommendations and on-going user training.

### HOW DOES IT WORK?

#### Step 1: Explore

This stage introduces clients to some of the many solutions, services, hardware and training options TechQuarters offers that can help digitally transform your business.

#### Step 2: Recommendation and Selection

TechQuarters Cloud Consultants visit the client site and carry out a detailed audit of the current infrastructure and technologies. Our consultants will then make recommendations and discuss technology options with the client, before presenting a formal cloud roadmap strategy document.

#### Step 3: Implementation

During the implementation stage our cloud architects will roll-out your selected applications and services, as well as moving some or all of your data to Microsoft Azure hosting.

#### Step 4: Support and Training

During this stage, we help support your users to get up and running on all the newly implemented technologies and applications.

#### Step 5: Cloud Roadmap and Audit

On an annual basis we will audit your systems again and update your 3 year Cloud Roadmap as new technologies are released.

### WHAT ARE THE BENEFITS?

- Increased productivity
- End-to-end solution
- Cost-effectiveness
- Future proofed IT
- Business continuity
- Secure
