

DISASTER RECOVERY SERVICE

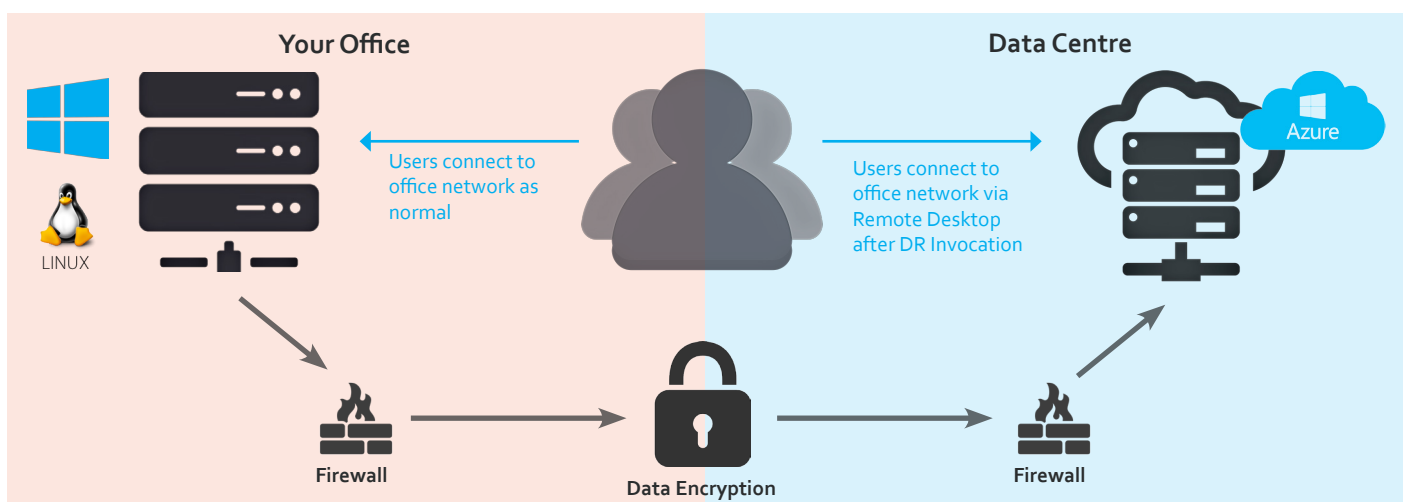

WHAT IS IT?

Using the very latest Microsoft Cloud Solutions, TechQuarters can replicate either your whole infrastructure or business specific servers to the Microsoft Azure Cloud, so you have a mirrored second site to work from in the event of a disaster. We will get you up and running within a matter of minutes and your users can access their usual IT systems from anywhere in the world, using a PC or laptop that is connected to the internet.

Once the disaster has been resolved, we will roll back the systems to your primary site, including all the changes that have happened during the time you've been working on the mirrored system.

HOW DOES IT WORK?

Our Cloud Architects will configure your systems to replicate off-site using Microsoft Azure Site Recovery (ASR). Once the initial replication is done, then it only replicates the small changes to the Data Centre, at set times during the day. When you need access to the second systems, we spin them up, upon your request, so they become live and accessible via remote networking.

WHAT ARE THE BENEFITS?

- Increased uptime
- Single, scalable solution
- Cost-effectiveness
- Reliable security
- Business continuity
- Disaster averting
