

GDPR SOLUTION

WHAT IS IT?

General Data Protection Regulation (GDPR) is a comprehensive new privacy law that gives residents of the European Union (EU) greater control over their “personal data” and requires organizations to maintain appropriate security of personal data. Failure to comply with the GDPR could result in significant penalties.

TechQuarters provides services that help organisations implement the right processes and technology to conform to the regulations.

HOW DOES IT WORK?

TechQuarters performs the work on a phased approach. We start by implementing GDPR Discovery software on your network devices and end points. This audits all your Personal Identifiable Information (PII) and reports upon the locations, so the data can be actioned.

We will also introduce you to a GDPR consultant who will train your internal person on GDPR processes and the notable points of the legislation, to enable you to implement on-going business processes for compliancy. During the latter phase we will implement technology to secure your environment against breaches.

PHASE 1 - DATA DISCOVERY

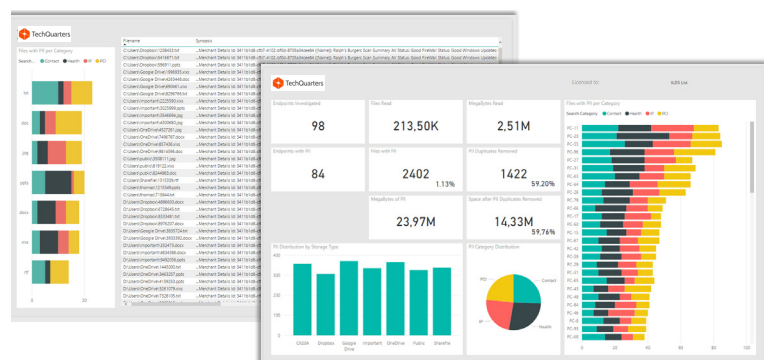

Searching PII data

PHASE 2 - PRESENT

Report and action data
GDPR compliance training

PHASE 3 - PROTECT

Secure environment with technology
E.g. Firewall, malware and anti-virus protection, BCP, folder redirection policy

TechQuarters GDPR Solution tool

WHAT ARE THE BENEFITS?

- Roadmap to compliancy
- Secured networks
- Minimized risk against penalties
- On demand external advise
- GDPR readiness solution
- Minimized risk of costly breaches

'Using TechQuarters on our GDPR journey has been very helpful. Their service is useful and comprehensive.'

Peter Murphy, MD - Right Now Residential
