

AZURE HOSTING & STORAGE (IaaS & PaaS)

WHAT IS IT?

TechQuarters are a Gold Microsoft Azure Partner and specialise in Azure services. We run trial proof of concepts for Azure Platform as a service, through to full migrations of networks to a hosting platform.

We can move a clients whole network to the hosted environment in Azure, move local business applications to a hosted server for ease of access, sitting on Microsoft SQL as a service in Azure, move data centre workloads from none Microsoft to Azure or simply use ASR for backups and business continuity from on-premise server infrastructures.

Our team of Cloud Architects are on hand to perform POC migrations and test rigs to help the clients harness the power of Microsoft Azure Hosting.

HOW DOES IT WORK?

Server & Storage (IaaS):

Hosted servers can be spun up, spun down and used for ad-hoc or on-going work.

If you want us to weave them into your present on premise network we assign a Cloud Architect to work with you and scope the size of the requirement, provision the server(s) and help network it back to your on premise systems.

If migrations are necessary, we can help with those and also with faster direct internet connections to Azure provisioned using Microsoft Express Route.

SQL & Application Hosting (PaaS):

The application is installed remotely on top of an SQL Instance, provisioned in Microsoft Azure. This would then be published to the user by means of a web browser or a remote app capability using Citrix on Azure.

WHAT'S INCLUDED?

- Proof of concepts (PoC)
- Server migration
- Platform as a service (PaaS)
- Infrastructure as a service (IaaS)
- Business Continuity
- Azure backup
- On-going support

WHAT ARE THE BENEFITS?

- Scalable
- Cost effective
- A Flexible solution
- Backed-up
- Secure
- Comprehensive
- Future-proofed
